

Motor Drive Supported Platforms List (SPL) - Precision-IQ v15.00 - Version A

The Motor-Drive Supported Platforms List is a combination of the EZ-Pilot Supported Platforms list, and the motor-drive portions of the Autopilot Supported Platforms List. It includes the Supported Platforms information for all Motor-Drive guidance solutions, including EZ-Pilot, EZ-Pilot Classic, EZ-Pilot Pro, and Autopilot Motor-Drive.

Release Notes

- Generic APMD - Tracked, Remote Engage Update
- Generic APMD - Ultra Small (sub-2m) Antenna Forward
- Iseki NP80 Rice Transplanter APMD
- Iseki PRJ8 Rice Transplanter APMD
- CNH Farmall X (Turkey) APMD
- NH T5 BLM (Turkey) APMD

The Motor-Drive Supported Platforms List has three sections:

1. Machine-Specific Profiles (EZ-Pilot Pro/Autopilot Motor-Drive)

This section includes machines that have motor-drive profiles tuned specifically for that machine series. These machines are fully supported for all motor drive solutions.

2. No Machine-Specific Profiles (EZ-Pilot, EZ-Pilot Classic)

This section includes machines that have a platform kit designed to fit that machine's steering column, but do not have a motor-drive profile tuned for that machine series. This was previously the EZ-Pilot Supported Platforms List.

These machines are fully supported for EZ-Pilot and EZ-Pilot Classic.

3. Generic Profiles

Machines that do not have a motor-drive profile tuned for its respective series can still be steering with EZ-Pilot Pro and/or Autopilot Motor-Drive by use of the Generic Motor-Drive Profiles included in Precision IQ.

Note: In these generic-profile installations, hardware is supported and covered under warranty, but the steering performance of the machine is not guaranteed. For concerns on tuning a machine using a Generic Profile, contact your Regional Sales Engineer.

For All Profiles

- Only use official Trimble platform kits with Trimble guidance systems. Installing on unsupported platforms may void product warranty.
- Always ensure you follow the installation instructions and download the latest version on the Ag Resource Center Library
- For NAV-900 Installations, OEM Specific mounting brackets or SPAR mounts are recommended. VHB should be used only if no rigid mounting options are available.
- Machines may have been listed with different platform kits than are listed on this SPL due to kit revisions. Installs with kits associated with a machine on a previous version of the Supported Platforms List are also supported.
- If the machine you are installing on has information listed in the "OEM P/N's" column, please verify if these parts have been installed on the machine. P/N's listed in this column are not Trimble P/N's and are only available through the respective machine's OEM sales channel.
- This Supported Platforms List is correct to the best of Trimble's knowledge at the time of posting. Regional variations and vehicle updates may cause incompatibility. In these cases, Trimble will restock platform kits from installations that are not functioning as expected due to an unknown machine variation, however Trimble is not able to refund installation expenses incurred in these cases
